

Residential Water Filters

Cleaner, Fresher, Better Tasting Water

BLAKE

WATER SOLUTIONS

Why Do I Need a Water Filter?

In addition to removing foul tastes and odors from your water, a Blake Water Solutions home water filtration system provides a number of additional benefits to the homeowner.

- Significantly reduce corrosion. If you are experiencing blue-green staining in your tub, sinks or toilet this is a sign that your water is corrosive.
- Improving water pH levels extends the life of fixtures, components and copper piping within major appliances and water heating systems.
- Prevent rust stains in sinks, tubs, dishwashers and toilets—as well as on concrete walkways, patios and exterior siding of the home wherever you water your lawn and garden.
- Eliminate sediment particles from well water.
- Remove foul odors and tastes including chlorine and the common “rotten egg” odor caused by hydrogen sulfide gas.

From our home in northeastern US to your home and family, you can trust a water conditioning product assembled by Blake Water Solutions. Local, trusted and family owned for two generations, our products are built with pride in the USA.

Every Problem Has A Solution!

Not every home is faced with the same water quality problems. We offer more than a dozen different types of filtration media, each designed to handle specific contaminants. Our filtration systems can handle just about any level of household water consumption.

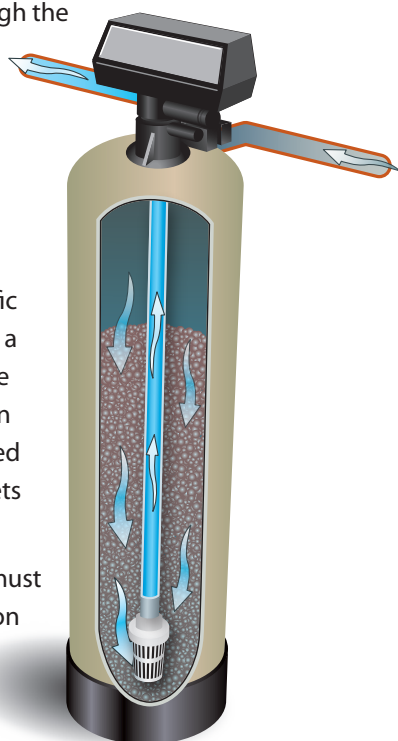

Our Authorized Dealer is **Your Local Water Quality Expert** — you can rely on them to help you determine the specific contaminants in your water system and to guide you through the process of selecting the best system to deal with your specific water quality issues.

How Do Water Filters Work?

Contaminated water enters the unit and passes through the filtration medium. Depending upon the specific contaminants and the type of media, a variety of processes occur causing the contaminants to remain suspended in the filtration medium while the filtered water continues to flow to your faucets and appliances.

Periodically, certain filtration media must be "regenerated," allowing the filtration media to continue performing.

Our filtration units are available with either manual or fully automatic electronic controls. Your Local Water Quality Expert can help you determine which type of unit is best suited to your family's lifestyle.

You Have Water Problems?	Blake Has Water Solutions!
Low pH causing: <ul style="list-style-type: none"> • <i>pinhole leaks in piping</i> • <i>blue/green stains</i> 	Calcite® Acid Neutralizing Filtration Media
Iron <ul style="list-style-type: none"> • <i>yellow/orange stains</i> Manganese <ul style="list-style-type: none"> • <i>black/brown stains</i> 	Manganese Greensand Birm® Centaur® Carbon Filtration
Metallic taste Rotten egg odor Chlorine odor Volatile organic compounds (VOCs) MTBE Pesticides	Activated Carbon Filtration
Sediment Turbidity Discolored water	Filter Ag® ChemSorb Multi-layered system

Selecting The Proper Filtration Media

The choice of filtration media depends upon a variety of factors including the types of contaminants, pH levels, water usage habits and water pressure levels within your home. Your Local Water Quality Expert has the experience and resources to design the optimal filtration plan for your specific water system.

Your Local Water Quality Expert:

Blake Water Solutions' fully transferable **10-5-1 Warranty** is one of the strongest guarantees in the industry! Our tanks are covered for 10 years, control valves are covered for 5 years and all other components are covered for 1 year.
